Karbosan

Maximize Your Performance with GriteX Fibre Back-Up Pad!

Specifically engineered for grinding operations with fibre discs, the GriteX Fibre Back-up Pad delivers up to 15% increased performance while offering exceptional resistance to high temperatures and high-pressure grinding conditions.

Karbosan gritX

Fibre Back-Up Pad

- **High** Performance
- **Long Service Life** & More Savings
- **Airflow Channels to** Prevent Overheating
- **Durable** Structure

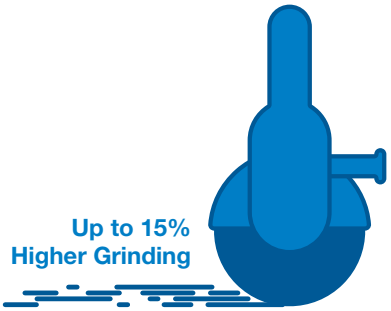
Maximum Performance, Superior Durability

The advanced design delivers up to 15% increased performance in grinding operations. Thanks to its durable structure, it enables safe and stable operation even on hard and demanding surfaces, allowing you to achieve maximum efficiency with minimal wear.

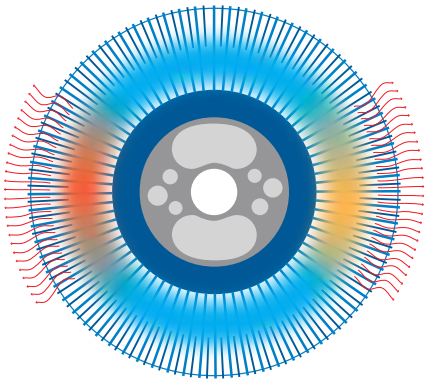


Longer Life, Lower Costs

Thanks to the special materials and durable structure used in its design, the GriteX Back-up Pad delivers long-lasting performance and cost savings. It resists wear and deformation over time, allowing for longer periods of use. This means fewer disc changes, improved productivity, and a lower cost per job.

Consistent Cool Performance with Integrated Airflow

Specially designed airflow channels within the pad body dissipate the heat generated during operation, preventing the fibre disc from overheating. This extends disc life and minimises undesirable effects such as burning or discolouration on the work surface. Even under extended heavy-duty use, it delivers stable, reliable performance.



Karbosan GriteX Fibre Back-Up Pad Range

The **Karbosan GriteX Fibre Back-up Pad**, is available in three different diameter options to enhance your grinding performance.

Dia. (mm)	Article	Barcode	Pack
