

Karbosan

Surface Quality or Savings? Why Settle for One?

Get Both!

The new ProGrit ACR31 combines its special coating with a uniformly distributed abrasive structure to deliver a smoother, more consistent surface finish. Its long-lasting performance also helps reduce production costs, providing greater efficiency and savings.

Karbosan *progrit*

Smoother Surfaces

Thanks to its advanced abrasive technology, ProGrit ACR31 delivers consistent sanding performance and helps achieve a smooth, uniform surface finish.

Longer Service Life

Its special anti-loading coating prevents sanding dust and debris from adhering to the disc surface, helping maintain high abrasive performance for longer.

Durability and Flexibility Combined

High-quality aluminium oxide abrasive grains are evenly distributed on a durable C-Weight paper backing, combining strength and flexibility for easy and comfortable sanding.

Wide Range of Applications

An ideal solution for surface applications across a wide range of industries, particularly woodworking, automotive and marine, from pre-paint surface preparation to varnish removal.

Applications of ProGrit ACR31 Hook & Loop Discs

Karbosan ProGrit ACR31 Hook & Loop Discs deliver stable sanding performance even in demanding applications, enabling fast, controlled and efficient sanding on challenging surfaces.

- Smoothing and surface preparation on wood surfaces
 - Sanding of MDF, particleboard and solid wood
 - Filler sanding and pre-paint surface preparation in automotive applications
 - Intermediate sanding between varnish coats and surface smoothing
- Light deburring and surface cleaning on metal surfaces
 - Controlled removal of rust and surface contaminants
 - Surface preparation prior to paint and varnish applications

Features of ProGrit ACR31 Hook & Loop Discs

Smoother Surfaces

Thanks to its advanced abrasive technology, ProGrit ACR31 delivers consistent sanding performance and helps achieve a smooth, uniform surface finish.

Long-Lasting and Efficient Performance

Reduced loading and consistent performance help minimise disc changes. This saves time, lowers production costs and supports a more efficient sanding process.

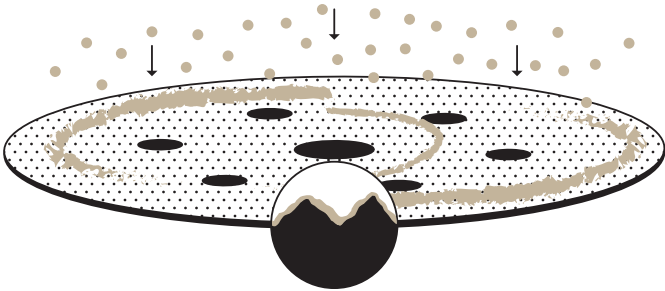

Reduced Loading with Special Coating Technology

The special stearate coating of ProGrit prevents sanding dust and debris from adhering to the disc surface. This helps minimise loading and maintain consistent performance for longer.

Durability and Flexibility Combined

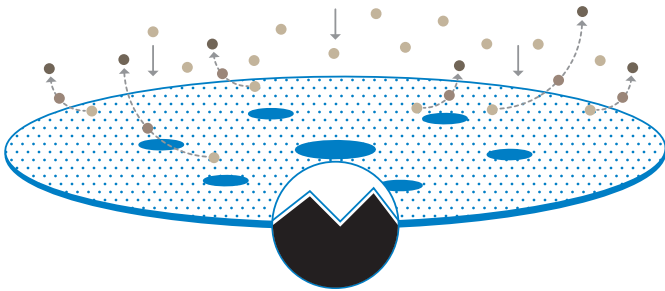

The C-weight paper backing provides a balance of durability and flexibility, allowing the disc to conform to the workpiece for controlled and stable sanding on both flat and slightly contoured surfaces.

Performance is Maintained and Efficiency Increases

Karbosan ProGrit ACR31 Product Range

Karbosan ProGrit ACR31 is available in three diameters (115, 125 and 150 mm) and a wide grit range from P40 to P1200, delivering consistent performance and improved efficiency across a variety of applications.
